

TESA TOPGUN

SIMPLE IO TESTING

B-L475E-IOT01A (Discovery Kit for IoT Node, STM32L)

STM32CubeIDE (IDE for STM32)

ผศ.ดร.สันติ นุราช

Department of Control System and Instrumentation Engineering, Faculty of Engineering

King Mongkut's University of Technology Thonburi (KMUTT)

Simple IO Testing

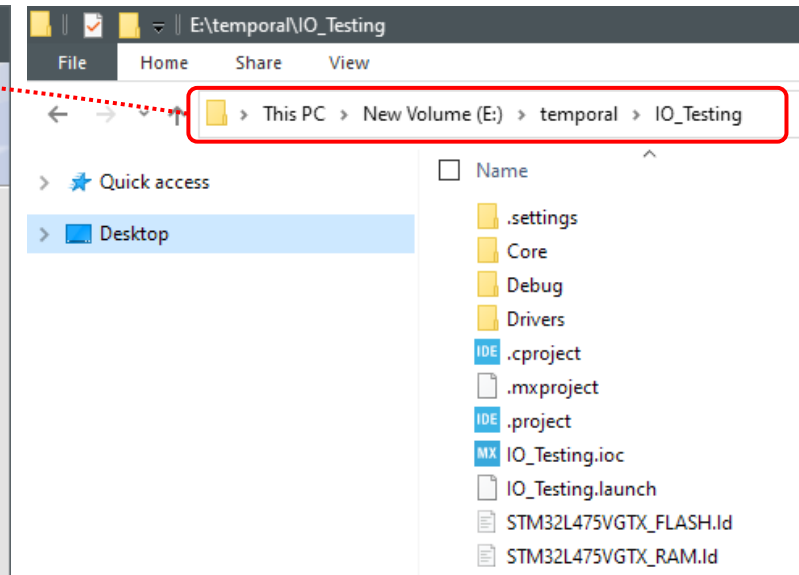

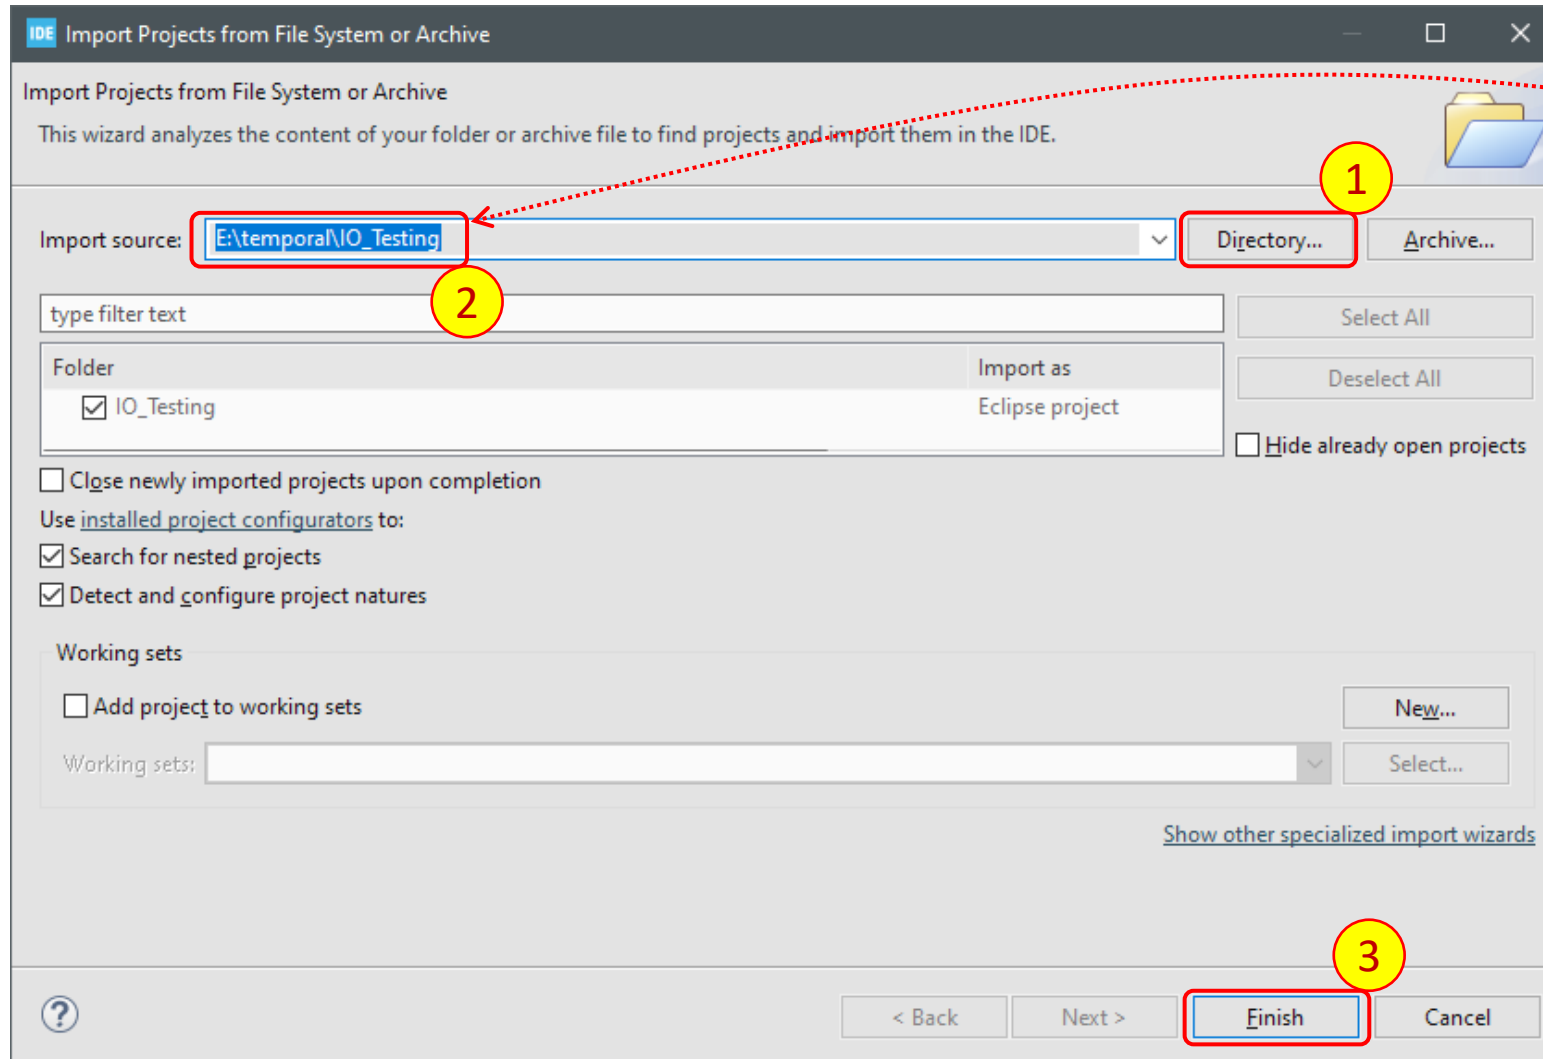

1) Download the [IO_Testing.7z](#) and extract it ([download link](#))

2) Open the STM32CubeIDE and File | Open Projects from File System...

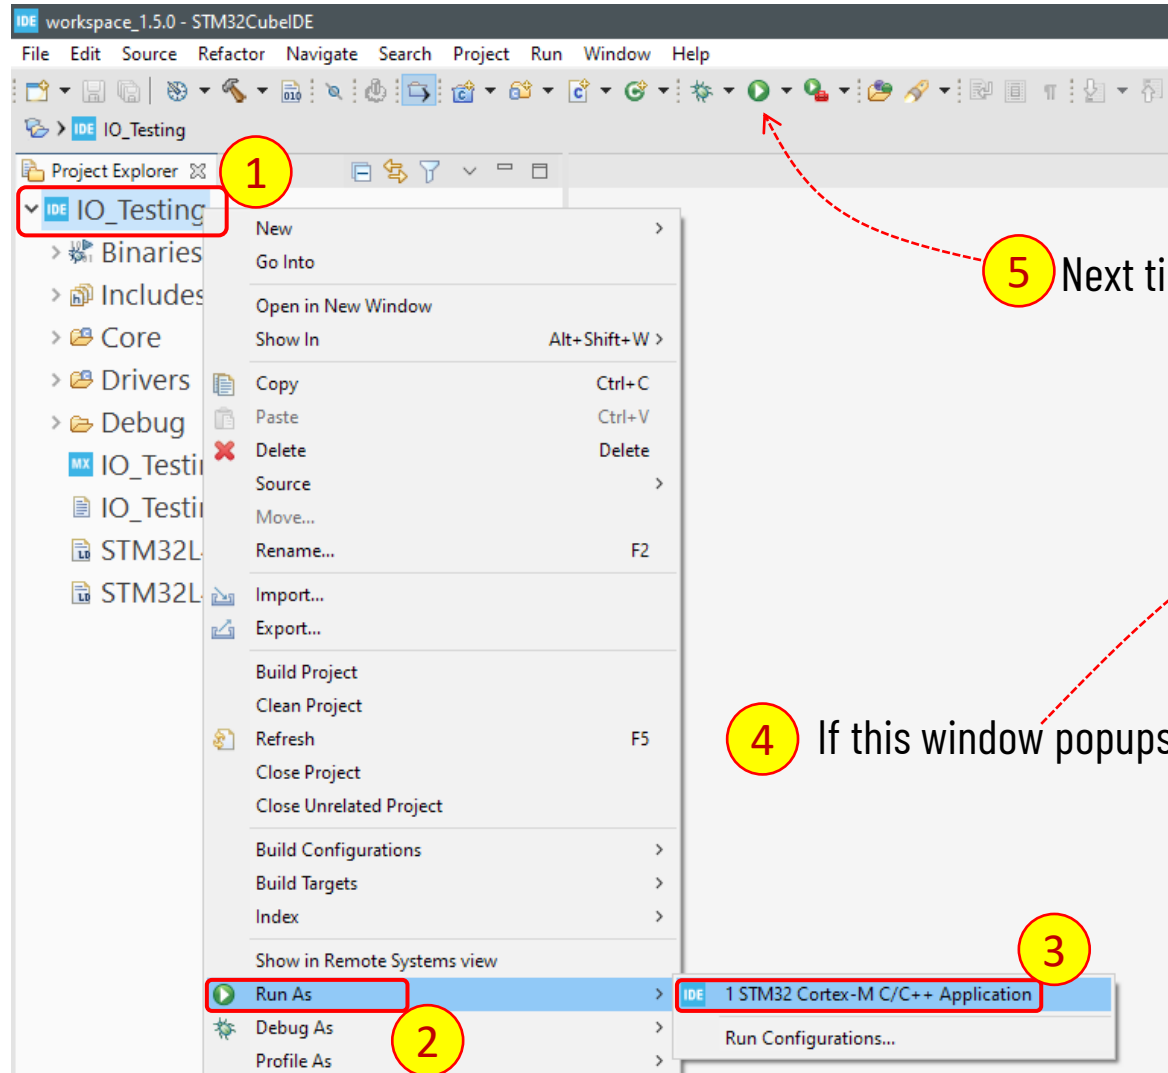

Simple IO Testing

3) Brow to the project directory (extracted directory), e.g.; E:\temporal\IO_Testing, and click Finish

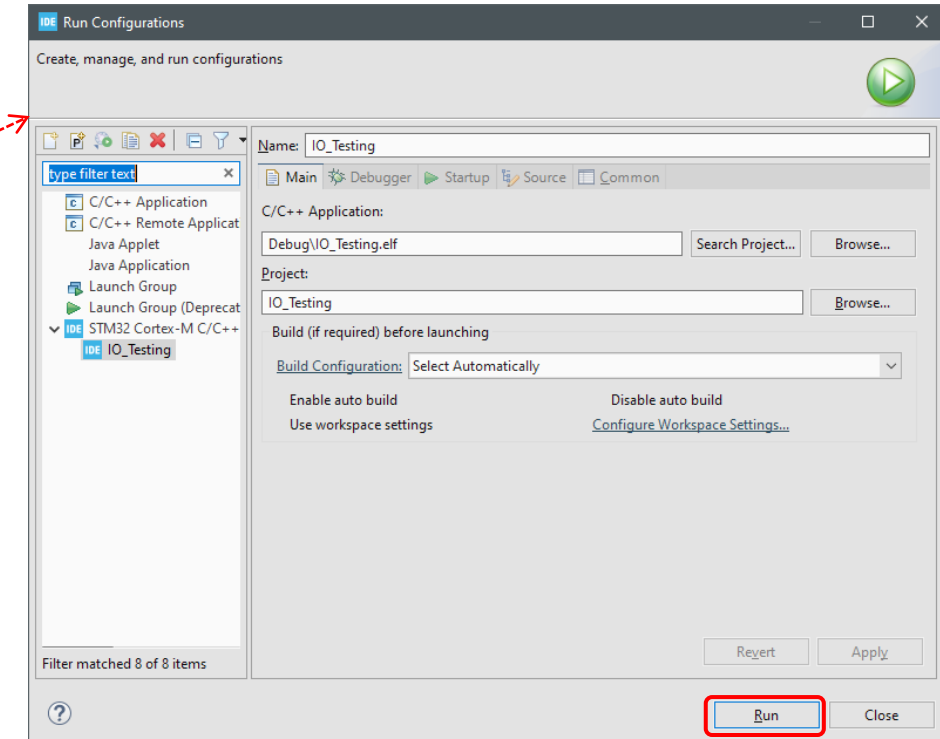

Simple IO Testing

4) Right-Click on the project name (IO_Testing) and click Run As | STM32 Cortex-M C/C++ Application

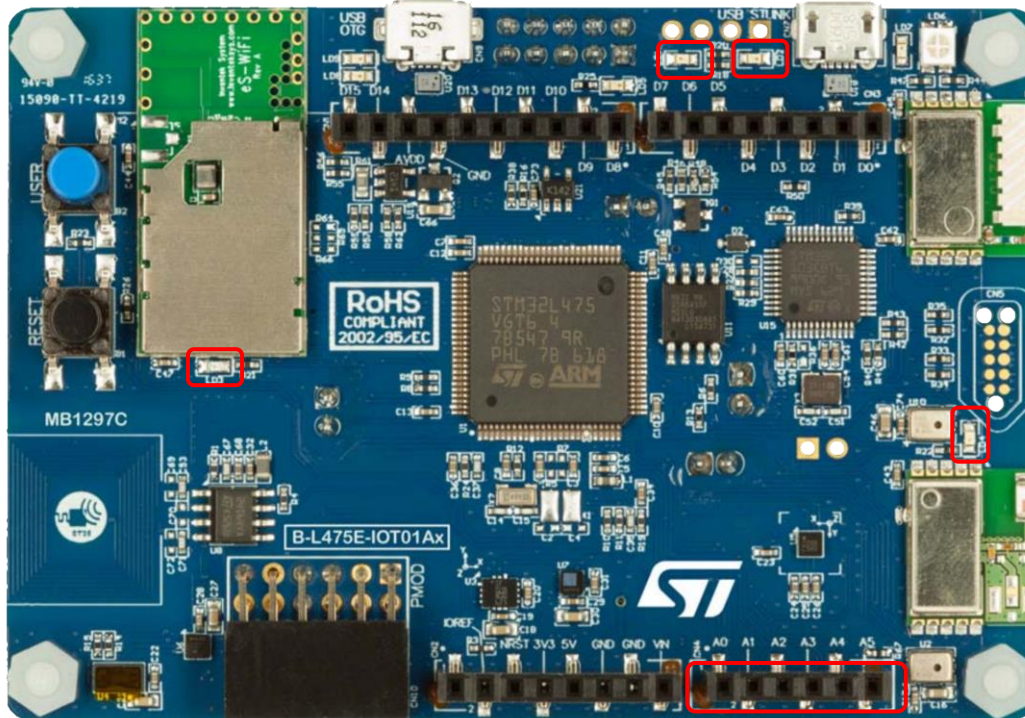

5 Next time, click this button

4 If this window pops up, click Run

Simple IO Testing

5) Check the LEDs status and Logic state of the A0-A5 of the board. They will change every 2 seconds (ON 2 seconds and OFF 2 seconds)

A0-A5

Can be used to control external devices

Simple IO Testing

6) Open the main.c and modify the code, then perform step 4 and 5

```
95  /* USER CODE BEGIN WHILE */
96
97  uint16_t ticks = 0;
98  uint8_t state = 0;
99  while (1)
100 {
101     /* USER CODE END WHILE */
102
103     /* USER CODE BEGIN 3 */
104
105     if(++ticks > 20) {
106         ticks = 0;
107         state ^= 0x01;
108         HAL_GPIO_WritePin(GPIOC, GPIO_PIN_0 | GPIO_PIN_1 | GPIO_PIN_2 | \
109             GPIO_PIN_3 | GPIO_PIN_4 | GPIO_PIN_5 | GPIO_PIN_9, state);
110         HAL_GPIO_WritePin(GPIOA, GPIO_PIN_4 | GPIO_PIN_5, state);
111         HAL_GPIO_WritePin(GPIOB, GPIO_PIN_2 | GPIO_PIN_14, state);
112     }
113     HAL_Delay(100);
114 }
115 /* USER CODE END 3 */
116 }
117
```

These two numbers are used to control the time of states (ON/OFF)

100ms * 20 = 2 seconds

THANK YOU!
